APP Manassas Completes Full Renovation and Begins Hangar Expansion

APP Jet Center is pleased to announce that the full renovation of its FBO at Manassas Regional Airport (HEF) in the Washington, DC market is complete. Also at HEF, APP's construction of an 18,000-square-foot hangar/office facility is underway and its purchase of a 12,000-square-foot hangar/office facility has been finalized.

"We are very excited to provide our Manassas clients with a fresh, new, upscale experience at APP Jet Center," Thom Harrow, CEO of APP Properties, Inc., said. "This entire project was designed with our clients' needs top of mind."

The million-dollar renovation was managed by NFI Interiors and BDA Architects in a mid-century modern design, the signature style of APP Jet Center FBOs. The renovated facility includes:

+ Expanded main lobby
+ Expanded crew areas
+ New snooze rooms
+ New conference room
+ New shower facilities
+ Addition of a full galley

Quinn Redden, general manager of APP Jet Center Manassas, added: "Our APP team is very proud of its new surroundings. We're honored to offer this first-class facility to our loyal clients and our growing list of new customers."

In July 2019, APP Jet Center won an area-wide competition for the right to build an 18,000-square-foot office/hangar facility at HEF that will be available to customers in October 2020. APP also completed the acquisition of an existing hangar/office facility at HEF. Combined, these new facilities increase APP's total hangar space at HEF to 250,000 square feet. They expand APP's overall portfolio to 700,000 square feet of hangar facilities in its four locations: Denver, Colo.; Fort Pierce, Fla. (Treasure Coast); Hayward, Calif. (San Francisco); and Manassas, Va. (Washington, DC).
